

## B430 drill

An all-new design. With unrivaled technology. The most user-friendly multi-hole punch on the market today. This way, punching your programmed punch system tapes or cards is a snap! All four punches can be easily removed or replaced using a spring-loaded mechanism. Also the adjustment unit can be easily removed.

In this way, positioning in relation to the document is child's play. Once the marking tabs are set to the desired punch size, put the setting unit back in place. In the same way, align each of the punches with the markings set before. programmed perforation. Nothing easier! Patented NOVUS technique!

### Characteristic:

**Punching capacity**

This is the number of sheets of 80gsm paper that can be punched at one time. Here, the maximum punch capacity is 30 sheets.

**Punch spacing**

The standard spacing is 80 mm, except for devices with variable spacing.

**German standard: GS security test mark:**

Control in accordance with the material safety law.

**Punch position:**

Adjustment bar for all common DIN formats: A4, A5, A6, A4 4 holes (3 x 8); as well as USQuart and Folio.

**Easy storage**

Locking the upper part reduces the size of the perforator and facilitates storage.

With the new type of adjustment unit allowing the exact positioning of the different punches. Possibility of easily adjusting the sliding marking tabs according to the spacing of the punches desired, in this way it is possible to reproduce any special spacing of the punches.

Extension of punches:
